

Considering a Saltwater Chlorination System for your swimming pool?

Never buy Chlorine again

No more sore or **red** eyes

No more brittle or hair **color** change

No more dry skin – especially beneficial for Psoriasis, Eczema & Sensitive Skin Sufferers

Soft and Silky feel to the water – **No Chlorine** smell after swimming

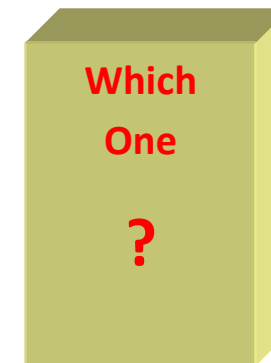

Simple pool maintenance – Looks after the pool sanitising when you are away

Inexpensive to operate – Saves money on Chemicals

Gives you more control over what chemicals you are swimming in.

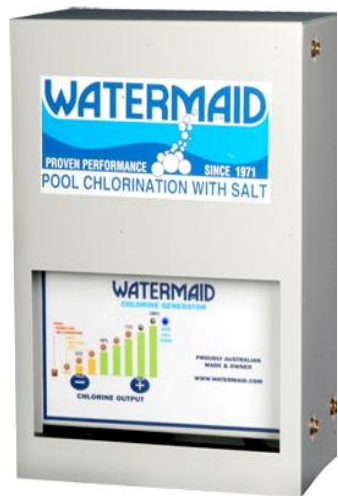

Simple controls (Multi-language, English, Spanish, German and French)

Self Cleaning Cell

The above statements are applicable to most Saltwater Systems for swimming pools & Spa's

What is the difference with a Watermaid system?

1. Ted Romer of Watermaid was the originator of Saltwater Chlorination for swimming pools in the 1960's
2. Watermaid have been producing Saltwater Chlorinators since 1971 – Australia's 1st. manufacturer.
3. Watermaid only manufacture one size system = lower production cost + will sanitize up to 150,000 litres. Producing 720 Grams / Day Chlorine equivalent
4. Patented Watermaid cell design for simple installation and low cost manufacture with unique 'self cleaning' design with highest specification materials = reliability + long life.
5. High Quality Robust design with long life and reliability built-in – Power supply rated to run continuously at 100% - Can Super-Chlorinate if required.
6. One size suits all residential pools up to 150,000 litres + Unique "Self-Clean design".
7. Excellent Warranty with full after sales support for life of system.
8. Low cost cell replacement with an average 8 year life cycle.
9. All Standard Safety systems built-in – No extras to fail or additional equipment required.
10. Simple to operate in every language under the sun with just two + and – controls.
11. Longer Warranty period.

System Comparison chart on page 2

The Watermaid EZY-300 System represents the best value for money with highest output, simple operation, realistic prices - initially and for replacement spare parts after warranty

CTX – Sprint Chlore Junior		7	168		
Watermaid	EZY-300	30	720		

Notes:

All information taken from manufacturers specifications and available online

* Indicates nominal amperage output. The dual axis controller will slightly vary the amps to optimize the power to the cell

Output Power:

Cell Power 1 (5.0* DC amps)

Cell Power 2 (6.5* DC amps)

Cell Power 3 (8.0* DC amps)

Max Amps – Is directly related to the Chlorine production – Higher = more Chlorine

Grams Chlorine / Day is the maximum each system will produce except where output is automatically restricted* - in a 24 hour cycle – normal filtration running times reduces the amount available it is therefore recommended to purchase a more powerful unit to enable ‘Super Chlorination’ when required

Where the unit is not restricted you can run the system at maximum to ‘Super Chlorinate’ without purchasing chlorine in chemical form

For clarification regarding the above information please contact: Watermaid Europe S.L.
